#### **DETAILED ACTION**

## Rejections Repeated

1. The 35 U.S.C. 102/103 rejection of claims 1-5 anticipated by or obvious over Shimotori et al. has been repeated as previously made in office action 6/26/2006.

As to the new limitation, "the separators have a reactant gas flow passage on their surfaces facing the electrodes for supplying a reactant gas along the electrodes and a coolant flow passage formed between the separators for supplying a coolant while a direction in which the reactant gas flows crosses a direction in which the coolant flows," Shimotori et al. discloses the separators have a reactant gas flow passage on their surfaces facing the electrodes (figure 3 number 11) and a coolant flow passage formed between the separators (figure 3 number 15).

As to "for supplying a reactant gas along the electrodes", and "for supplying a coolant while in a direction in which the reactant gas flows crosses a direction in which the coolant flows" are intended uses. It has been held that a recitation with respect to the manner in which the claimed particle is intended to be employed does not differentiate the claimed article form a prior art article satisfying the claimed structural limitations. Ex parte Masham, 2 USPQ2d 1647 (1987)

2. Newly amended claims 6-7 are directed to an invention that is independent or distinct from the invention originally claimed for the following reasons: Claims 6-7 are directed to a method of assembling a fuel cell stack whereas the original clams 6-7 were directed to a fuel cell stack.

Since applicant has received an action on the merits for the originally presented invention, this invention has been constructively elected by original presentation for prosecution on the merits. Accordingly, claims 6-7 are withdrawn from consideration as being directed to a non-elected invention. See 37 CFR 1.142(b) and MPEP § 821.03.

## Response to Arguments

3. Applicant's arguments filed 6/26/2006 have been fully considered but they are not persuasive.

In response to applicant's argument that Shimotori fail to teach or suggest coolant passages that are formed between the separators for supplying a coolant, Shimotori teaches in figure 3 number 15, coolant passages that are formed between the separators 10 for supplying a coolant.

#### Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
